Measure and Manage Your Security Operations
Like Never Before

powered by  **tableau**
SOFTWARE

A New Standard for Security Operations Analytics

From historical trends to multi-dimensional visualizations, Siemplify BI takes reporting and interactive analytics to a whole new level, providing virtually limitless flexibility to visualize and derive insights from data captured by the Siemplify Security Operations Platform.

Powered by Tableau, Siemplify BI enables you to measure your entire security operations function, including people, cases, technologies, and processes. This data allows you to see granular details and overviews of key trends, both of which will fuel fresh insights and result in more efficient security operations.

Why Siemplify BI Makes You More Effective:

If You Can't Measure It, You Can't Manage It

Connect, visualize, slice, and dice all available data to more effectively measure and manage your operations. Reallocate team member's time to identified gaps or quickly act on a type of alert that can be automated.

Gain Instant Visibility on Security Operations Metrics

Easily generate multi-dimensional security operations insights and rise above the daily firefighting. Drive continuous improvement with out-of-the-box interactive reports and dashboard templates that are used by SOC's all around the world.

Demonstrate Value to Stakeholders

From visualizing risk reduction trends to gauging your return on investment, the flexibility of Siemplify BI allows you to create and schedule reports that demonstrate the value of your security operations to internal stakeholders and customers.

Capabilities:
