

# The #1 Cloud-Native Security Operations Platform

Siemplify Cloud is the industry's first cloud-native security operations platform. Reimagined for cloud delivery, Siemplify Cloud enables end-users and MSSPs to hit the ground running and derive value from SOAR faster than ever before, removing much of the complexity involved in deploying, maintaining and operating a SOAR platform.

## Take Your Security Operations to the Next Level

Built using cloud-native technologies, Siemplify Cloud makes it easier than ever to secure hybrid and multi-cloud environments. The platform seamlessly connects to cloud threat detection technologies, traditional detection tools such as SIEM and EDR as well as any on-premises tools, effectively bridging the gap between cloud and on-premises security operations to deliver unified incident response at the speed of cloud.

### Get Up and Running with SOAR Faster than Ever Before

Cloud-delivery of the market-leading security operations platform means you can focus your time on improving security operations instead of deploying and maintaining software. The expansive Siemplify marketplace includes ready-to-deploy use cases complete with playbooks, data and tutorials, allowing you to address threats like phishing or ransomware in minutes.

### Bridge Cloud and On-Premises Security Operations

Security operations today are increasingly hybrid, with cloud and on-prem environments presenting different security challenges and oftentimes utilizing different technologies for detection and response. Siemplify securely and easily orchestrates your security tools wherever they reside. From ingesting alerts to remediation, Siemplify Cloud empowers security teams to manage hybrid environments and rapidly respond.

### World-Class Security and Compliance

Siemplify Cloud holds up to the highest standards when it comes to the security, integrity and availability of your data. From regularly conducted penetration tests and vulnerability scans to our world class devops team, Siemplify Cloud gives you the confidence and peace of mind required for safe and smooth operations.

## The same SOAR benefits, now in the cloud:

Reduce Alert Overload

Automate Response Processes

Integrate 200+ Security Tools

Manage and Measure SOC Activity

## Trusted by the Best

From Fortune 500 firms to global MSSPs, Siemplify is the secret weapon behind many of the world's leading security teams.

"Siemplify is the *force multiplier* that allows us to be leaner and meaner"

Jovan Scott, SOC Manager

"The *grouping and context* that Siemplify provides allow us to see the complete picture"

Eric Taylor, Americas CTO

"My analysts love Siemplify. It allows them to automate repetitive tasks and focus on higher-level work."

Cameron Rayner, SOC Manager

## Packaging Overview

Siemplify Cloud offers a choice for enterprises and MSSP's of all shapes and sizes - whether you have a world class SOC or no SOC at all. Depending on your needs we offer purpose-built packages that vary in terms of capabilities, levels of support, and product features.

 <b>Essentials</b>	 <b>Professional</b>	 <b>Enterprise</b>	 <b>Service Provider</b>
For smaller security operations teams looking to automate key use cases quickly and easily.	For larger security operations teams with more advanced security processes and higher alert volumes.	For enterprise SOC's looking to manage large scale security operations from end to end.	For MSSP's looking to deliver high-margin, tailored security services to a diverse and demanding customer base.
